

RENEWV 2017 CLEAN ENERGY SCORECARD

Did your legislator vote for clean energy?

Renewable energy means affordable power, clean air and good jobs for Nevada. The Legislature passed 11 bills expanding clean energy and efficiency in 2017.

Look below to see how your legislator voted and to see what each bill means for Nevada's clean energy future.

Property Assessed Clean Energy

AB 5 allows financing for renewable energy or energy efficiency upgrades tied to the commercial property instead of the business owner.

More Renewable Energy for Nevada

AB 206 would have required 40% of Nevada's energy to come from clean sources by 2030, making the state a national leader and protecting ratepayers from increases in natural gas prices.

Vetoed by Governor Sandoval*

Access to Energy Efficiency

AB 223 allows all Nevadans to access money-saving energy efficiency measures by requiring at least 5 percent of these programs to be directed to lower-income ratepayers.

Restoring Rooftop Solar

AB 405 restores rooftop solar in Nevada, bringing back thousands of lost jobs and allowing homeowners to reduce pollution and utility bills by producing their own solar power. The bill also improves consumer protections for rooftop solar customers.

Clean Energy First

SB 65 requires the Public Utilities Commission of Nevada to prioritize energy decisions that provide the greatest economic and environmental benefit to the state, diversify the electric supply and reduce exposure to the volatile prices of fossil fuels.

Clean Energy Incentives

SB 145 restructures an incentive fund to support clean energy storage (battery) projects. The bill also ensures some of the funds support clean energy projects for lower-income customers.

Planning for Innovation

SB 146 requires investor-owned utilities (currently NV Energy) to submit a plan that identifies the costs, benefits and barriers to adopting technologies like rooftop solar and other small-scale distributed energy.

Promoting Energy Conservation

SB 150 requires the Public Utilities Commission to set energy saving goals for investor-owned utilities to help customers reduce use and save on their electric bills. The bill also requires that at least 5 percent of energy efficiency program spending must go to programs for lower-income Nevadans.

Energy Storage Goals

SB 204 asks the Public Utilities Commission to determine whether utility companies should have energy storage targets to increase storage of solar energy and make that energy available when the sun is not shining.

Community Solar Gardens

SB 392 would have allowed community solar gardens, where neighbors, businesses and non-profit organizations like churches share the costs of a solar array and reduce their electricity bills. The bill also dedicated funding to help lower-income users participate in the program. Rooftop solar currently isn't an option for many Nevadans, including renters and lower-income families. **Vetoed by Governor Sandoval***

Clean Energy Fund

SB 407 creates the Nevada Clean Energy Fund, which increases financing opportunities for renewable energy and energy efficiency improvements for homeowners and businesses. It is modeled on successful programs in other states.

✓ Yes ✗ No — Excused

* Governor Brian Sandoval signed all bills detailed above except AB 206 and SB 392. RenewNV's goal is to pass and enact renewable energy standard and community solar gardens legislation during the 2018-2019 legislative session.
